Fully Automated Workflow with The Delta⁴ Discover

Efficiency and Ease of Use Without Additional Clinical Workload

**PLAN IMPORT**
Physicist imports patient’s DICOM files into the Delta⁴ Software (no additional recalculations required).

**DELIVERY VERIFICATION**
Therapist selects the patient to be treated and the ADI interface automatically communicates with the Delta⁴ Software, which selects the proper patient for verification. The Delta⁴ Discover monitors the treatment plan in real time, and the Delta⁴ software collects treatment data.

**DATA ANALYSIS**
Upon completion of treatment, data is automatically analyzed and displayed in the Delta⁴ Software.

**REVIEW AND REPORTING**
Treatment data and results are stored in the Delta⁴ Software; in case of an error, the physicist is immediately notified via an email automatically generated by the system. An overview of the treatment course progress and results are available at all times.
